Tawlatna

Requirements Report – Analysis Phase

A Jeddah-based platform that turns café off-peak hours into hosted board-game events.

Course: CS3151 Software Engineering | Section 1
Instructor: Dr. Passent Elkafrawy
Team: Faysal Hossain Piyal, Albaraa Sait, Abdullah Bawazir
Date: 12 October 2026

8. Project Management

1. Problem to be Solved

1.1 Background

Jeddah is full of cafés, but many of them go unnoticed and have slow business. This is not because of poor food or service, but because people have no particular reason to visit them. Tuesday and Wednesday evenings are typically the emptiest, and small cafés cannot afford effective advertising to fill those tables.

At the same time, people who enjoy board games struggle to find organized, social game nights nearby. Planning through WhatsApp groups is messy, and the board-game apps that exist are mostly built outside Saudi Arabia: they let people host events anywhere, which raises safety concerns, and they offer no Arabic support or local presence.

1.2 Problem statement

> *Local cafés in Jeddah have empty tables during off-peak hours and cannot afford effective advertising, while people who enjoy board games have no reliable, safe and Arabic-friendly way to find and join organized game nights.*

1.3 Problems by stakeholder

Stakeholder	Problems they face today
Café owners	Empty tables on slow mid-week evenings; high cost of social media ads; no organized way to host and manage events; manual accounting of revenue.
Casual players	Hard to find organized game nights nearby; messy coordination through WhatsApp group chats; missed reminders and unclear loyalty balances; no guarantee that other players will show up.
Cashiers	Manual logging is slow and error-prone; long queues on event nights; damaged QR codes and internet outages; unclear instructions during peak hours.
Platform operators (Developer / Admin)	Manual verification of partner cafés; data anomalies; difficulty verifying commission accuracy; policy violations by accounts.

1.4 Proposed solution

Tawlatna is an event-management mobile platform that connects cafés seeking more foot traffic with people looking for board-game events:

- Cafés schedule hosted board-game sessions in their off-peak hours; players pay nothing to join.
- Players discover events, reserve up to 4 seats, and receive a QR code linked to their table.
- Cashiers scan the QR code to check players in and log food and beverage (F&B) purchases at the register.
- The platform earns a 15% commission on F&B sales during events only, so cafés take no upfront risk.
- Players earn loyalty points for their purchases and redeem them as rewards; owners and admins get dashboards, commission reports and an audit trail.

1.5 Project goals and scope

- Fill cafés' off-peak tables and raise F&B sales without advertising spend.

- Give players one reliable place to discover and join organized game nights in safe, well-known venues.
- Make check-in and sales logging fast and accurate for café staff.
- Provide a transparent, auditable record of attendance and commission.

In scope: event discovery and reservation, QR check-in, F&B transaction logging, commission calculation, loyalty rewards, owner dashboards and reports, admin audit tools.

Out of scope (this version): letting users host games at any location (Tawlatna is café-only by design) and charging players for seat reservations.

2. Market Study (Feasibility)

2.1 Market overview

The target audience is youth, university students, young professionals, casual board gamers and specialty café operators in Jeddah. The feasibility study estimates the addressable local market at about SAR 180 million per year spent on non-food entertainment, social gatherings and gaming events in Jeddah cafés, with demand for organized social experiences exceeding supply during mid-week hours.

Tawlatna would be the first mover focused on café-hosted board-game events in Jeddah. It starts with 10–15 premier specialty cafés in dense central districts (Al-Zahra, Al-Rawdah, Al-Shati) before expanding city-wide and to other Saudi cities. Likely future competitors are general ticketing apps (Webook, Hala Yalla), dedicated board-game lounges and local meetup organizers.

2.2 Competitor analysis

Most competitors are located outside Saudi Arabia and host events anywhere. Flexible locations may look like an advantage, but they are a safety disadvantage; holding events in well-known cafés gives male and female users a sense of security. None of the board-game competitors offers a loyalty program, so Tawlatna adds coupons and offers on the player's next purchase in the café.

Table 2.1 – Feature comparison

Feature	SeatUp	Meeple Match	OpenTable	Tawlatna
Online booking	✓	✓	✓	✓
Create own profile	✓	✓	✓	✓
Events at cafés only	✗	✗	✗	✓
Loyalty program	✗	✗	✓	✓
Board games	✓	✓	✗	✓
Host games anywhere	✓	✓	✗	✗

Table 2.2 – Detailed comparison

Attribute	SeatUp	OpenTable	Meeple Match	Tawlatna
Core idea	Find or host a board-game table and reserve a seat	Reserve a table at a venue; same "book a seat" service, different industry (restaurants)	Host or join board-game sessions anywhere, not tied to cafés	Book a board-game seat at a partner café in Jeddah
Local / Arabic	No Arabic, no Saudi focus; global and generic	Global platform, not board-game or Saudi-specific	Not Saudi-focused; location-agnostic	Arabic-first, built for the Jeddah market
Café partnerships	Venues can be discovered, but no formal booking or revenue share	Yes: restaurants pay to be listed and take bookings	None: sessions are not tied to partner cafés	Formal onboarding and commission-based revenue share
Loyalty rewards	None	Yes: dining points redeemable for future bookings	None	Points and expiring coupons for attendance

Attribute	SeatUp	OpenTable	Meeple Match	Tawlatna
No-show handling	Host adjusts seat count manually; no RSVP confirmation	Reservation reminders	No RSVP confirmation or no-show tracking	RSVP confirmation, auto-release of unconfirmed seats, no-show tracking
Discovery	List of nearby tables, no café map	Map and "near me" search	Online booking with profiles; events not limited to cafés	Filterable map of live sessions by location and time

RSVP: a request for someone to confirm whether they are coming to an event.

2.3 Customer feedback analysis

To find common issues with existing solutions, customer reviews from Google Play, the Apple App Store and tech forums were analyzed.

What users like

- The simple 3-step flow (host or join a game, pick location and time, done), with no more WhatsApp groups.
- Filtering games and sessions by location and time, and browsing partnered board-game cafés on a map.
- Being free to use.

Market gaps and complaints

- **No reliable attendance guarantee:** Meeple Match itself admits in its FAQ that it cannot guarantee players will show up.
- **No regional presence:** no dedicated coverage or Arabic language support for the Saudi and Gulf market.
- **Little social proof:** few public, verifiable reviews, which signals low market penetration and trust.
- **Dependence on partner cafés:** the café-booking feature only works where a café has already joined.

2.4 Market opportunity and differentiation

- **Asset-light café activation:** existing coffee shops become temporary social board-game venues without buying inventory or managing events.
- **Seamless social discovery:** one app to discover, book and join curated game nights across Jeddah neighborhoods.
- **Win-win monetization:** a performance-based commission on F&B sales gives cafés zero-risk marketing during off-peak hours.

2.5 Feasibility summary

Area	Finding
Technical	Relies on proven technology: Flutter mobile app (iOS and Android), cloud hosting in Saudi-region data centers, payment-gateway integration, and offline-cached QR codes so cafés can validate bookings when connectivity drops. Low technical risk.
Operational	Lean founding team of four growing to nine by the end of Year 1. No venues, inventory or major facilities are needed because the model is asset-light.
Legal and regulatory	Compliance with SDAIA data-protection rules, ZATCA e-invoicing, SAMA guidelines for digital-wallet transactions, and commercial registration and licensing.

Area	Finding
Marketing	Instagram and TikTok campaigns, on-table QR standees in partner cafés, micro-influencers and referral incentives: low-cost channels that suit a mobile-first audience.
Financial	Seed funding of SAR 250,000; break-even in Month 10; Year 3 net profit margin above 32%; about 144% return on investment over three years (see Section 8.4).
Recommendation	**Proceed with the project.** The market study confirms strong demand for accessible, organized social entertainment in Jeddah that pairs coffee culture with board gaming.

3. Business Model Canvas

The canvas below summarizes how Tawlatna creates, delivers and captures value (blocks are numbered in sequence).

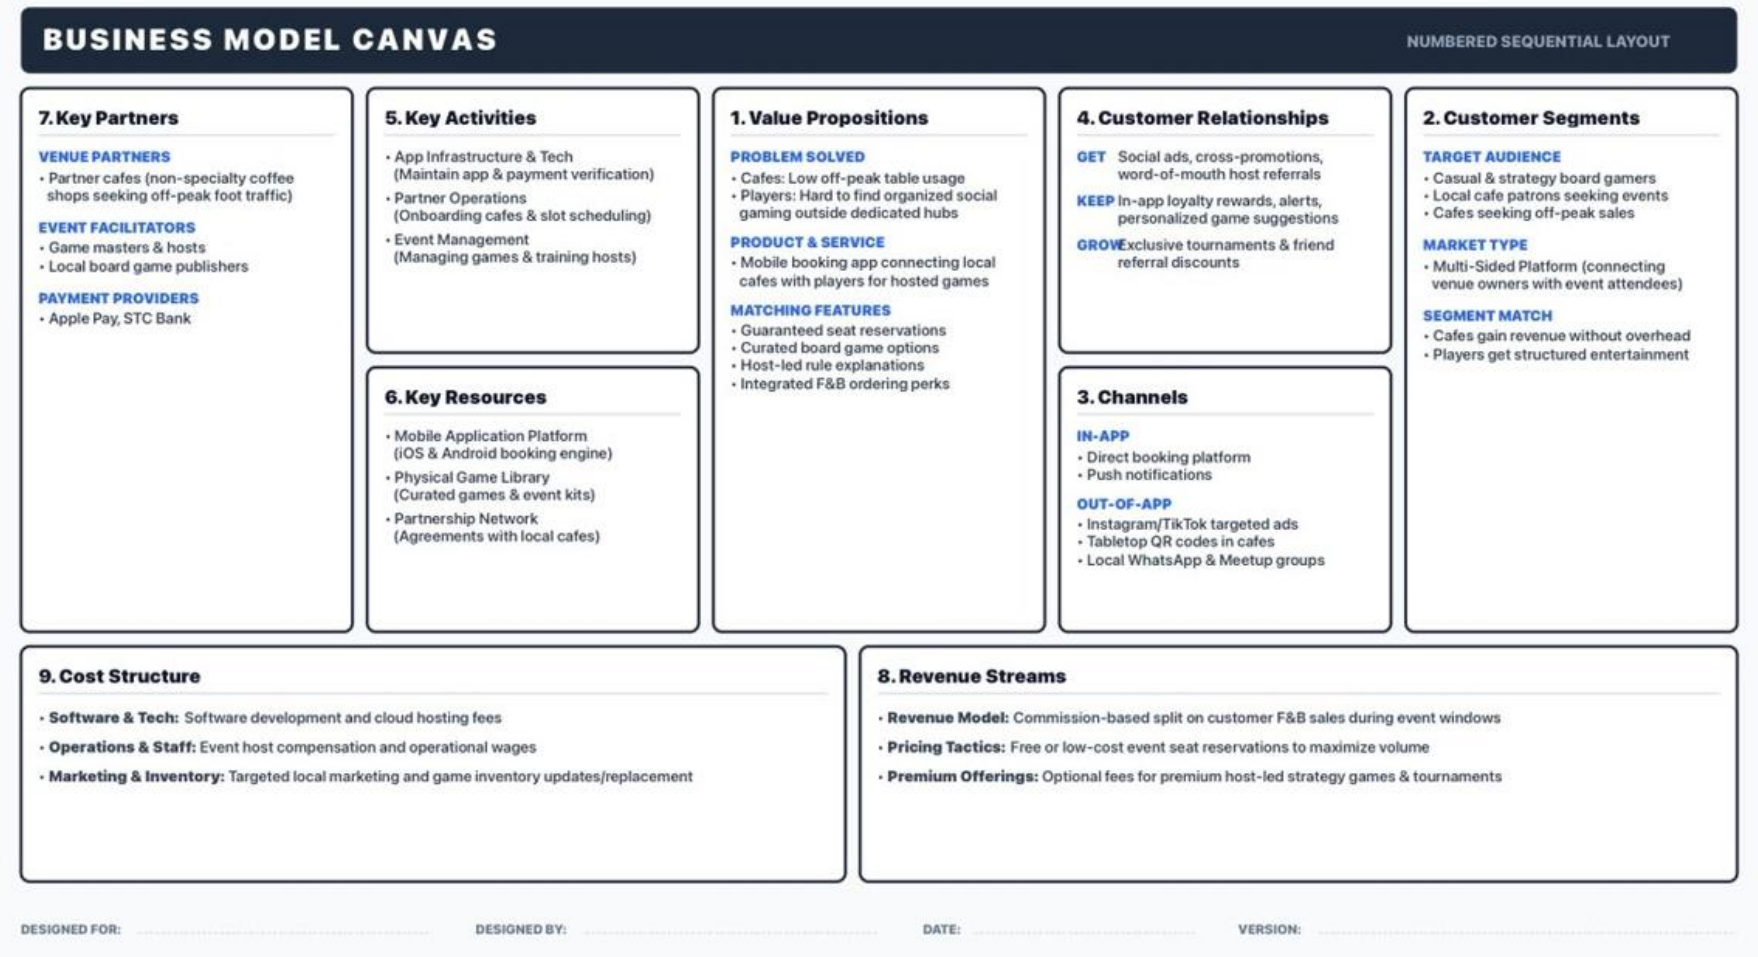

Figure 1 – Tawlatna Business Model Canvas

3.2 How the canvas connects to the requirements

Canvas block	Key content	Where it appears in this report
Customer segments	Casual and strategy board gamers; local café patrons seeking events; cafés seeking off-peak sales	Personas (Section 4)
Value propositions	Guaranteed seat reservations; curated board-game options; host-led rule explanations; integrated F&B perks	UC-2, UC-3, UC-5; REQ-1 to REQ-5
Channels	In-app booking and push notifications; Instagram/TikTok ads, tabletop QR codes, local WhatsApp and Meetup groups	UC-2, UC-5
Customer relationships	Social ads and referrals to get; in-app loyalty rewards and alerts to keep; exclusive tournaments to grow	UC-5, UC-10, UC-11
Revenue streams	Commission on F&B sales during event windows; low-cost seat reservations; optional premium host-led events	UC-9, UC-13
Key activities	App infrastructure; partner operations (onboarding, slot scheduling); event management	UC-6, UC-7, UC-16
Key partners	Partner cafés; game masters and board-game publishers; payment providers (Apple Pay, STC Bank)	UC-16; Section 7 (boundary note)
Cost structure	Software and cloud hosting; operations and staff; targeted marketing and game inventory	Section 8.4

4. Personas

4.1 User groups

User group	Role in the system	Frequency of use	Technical level
End user (Casual Gamer)	Browse events, reserve seats, order F&B, earn loyalty rewards	1–3 times per week	Medium to high
Café owner	Book event sessions, monitor attendance, audit F&B transactions, view commission reports	Daily	Low to medium
Cashier	Scan player QR codes to check in, log F&B transaction amounts, apply loyalty points	Daily	Low
Developer / Admin	Manage accounts, audit transaction logs, verify commission calculations, monitor analytics	Daily	High

4.2 Personas

Persona 1: Casual Player – "Omar"	
Age	24
Education	Bachelor's degree in Supply Chain
Role	University graduate
Goals	Find fun, affordable social activities and meet like-minded people who enjoy the same hobby.
Motivations	Exploring aesthetic coffee shops in Jeddah and enjoying casual competition.
Pain points	Organized social game nights are hard to find nearby; coordinating group outings through WhatsApp chats is messy.
Technical skill	High
Usage context	Browsing nearby events on a smartphone between classes or at home.

Persona 2: Café Owner – "Layla"	
Age	36
Education	Bachelor's degree in Business
Role	Local specialty café operator
Goals	Increase foot traffic and drink sales during slow mid-week evenings without paying high advertising costs.
Motivations	Maximizing table occupancy; earning extra revenue through event nights; attracting new customers who may return.
Pain points	Empty tables on Tuesday and Wednesday evenings; high cost of social media ads; no organized way to host and manage events.

Technical skill	Low to medium
Usage context	Checking the partner dashboard on a tablet at the counter; reviewing attendance and commission reports after closing.

Persona 3: Cashier – "Ahmed"	
Age	26
Education	Diploma in Hospitality Management
Role	Cashier / barista
Goals	Check in players quickly with the QR scanner; log F&B transaction amounts accurately; apply loyalty rewards without slowing service.
Motivations	Keeping the line moving on busy event nights; avoiding logging errors; earning shift bonuses for smooth operations.
Pain points	Manual logging is slow and error-prone; unclear instructions during peak hours; customers asking about loyalty points.
Technical skill	Low
Usage context	Using a store tablet at the register to scan QR codes and enter transaction amounts during events.

The Developer / Admin is a fourth user group without a full persona; the role is defined as an actor in Section 6.

4.3 Usage scenarios

Persona	Scenario summary
Omar (Casual Player)	On a Tuesday afternoon Omar filters for events near his neighborhood and finds a "Catan Night" starting at 8:00 PM. He reserves three seats for himself and two friends at no cost and receives one QR code for the table. At the café the cashier scans it to check him in. After ordering a latte and a croissant, the cashier logs the amount and scans the QR again to apply loyalty points. Omar earns points and plans to return.
Layla (Café Owner)	Layla notices her café is nearly empty on Wednesday evenings. From the partner dashboard she schedules a recurring "Board Game Night" every Wednesday, 8:00–10:00 PM, with capacity 16. After an event she sees 14 players attended and generated 42 F&B transactions; the app calculates the 15% commission and her net revenue, and she sees her Wednesday sales rise by 40%.
Ahmed (Cashier)	On a Wednesday event night a player shows a QR code. Ahmed scans it with the tablet and the system confirms the reservation and checks the player in. When the player buys a cappuccino and cake, Ahmed enters 35 SAR and scans the QR again; the app logs the transaction, applies loyalty points and records the 15% commission. The whole process takes less than 30 seconds.

4.4 Persona-to-feature mapping

Persona	Feature needed	Priority
Casual Player	Search for events near the player's area	High
Casual Player	Reserve seats at the café and receive a QR code	High
Casual Player	Rewards for attending multiple events and confirming purchases	High

Persona	Feature needed	Priority
Casual Player	Push reminder before the event (2 hours prior)	Medium
Casual Player	In-app game rulebooks and quick video guides	Medium
Café Owner	Book event sessions at the café	High
Café Owner	Real-time attendance dashboard for auditing the F&B log and commission reports	High
Café Owner	Analytics dashboard for event attendance and generated revenue	Medium
Cashier	Integrated QR scanner for instant check-in and transaction verification	High
Cashier	Automatic loyalty point application to ease the workflow	High
Developer / Admin	Manage and verify all low-privilege accounts	High
Developer / Admin	Audit the commission trail from the cafés	High

5. Requirements and Elicitation Methods

5.1 Elicitation methods

Requirements were gathered through the following techniques, each building on the previous one:

Method	How it was applied	What it produced
Market and competitor analysis	Compared SeatUp, Meeple Match and OpenTable on features, services and offers (document analysis).	Gaps to fill: café-only venues, loyalty program, no-show handling, Arabic and local focus.
Customer review analysis	Analyzed Google Play, App Store and tech-forum feedback on existing apps.	Pain points (no attendance guarantee, no regional presence) and features worth keeping (3-step booking, filters, map).
Business Model Canvas analysis	Worked through segments, value propositions, channels, key activities and partners.	Core scope: café events, F&B commission model, loyalty rewards.
Stakeholder and persona analysis	Defined user groups and three personas with goals, motivations and pain points (Lab 2).	Four actors and a persona-to-feature mapping.
Scenarios and user stories	Wrote one usage scenario per persona and user stories in Role–Feature–Benefit form; ten core stories selected (Labs 2–3).	Ten core user stories (Section 5.2).
SMART requirement transformation	Converted core stories into Specific, Measurable, Achievable, Relevant, Time-bound requirements (Lab 3).	REQ-1 to REQ-15 (Section 5.3).
Use-case modeling	Derived actors, goals and prioritized use cases; wrote fully dressed UC-3 and UC-9; drew activity, sequence and domain models (Lab 4).	18 use cases, business rules, non-functional requirements and open issues (Sections 5.4, 6).

Recommended validation not yet performed: short interviews or surveys with partner café owners and cashiers, a prototype walkthrough with players, and peer review of the analysis artifacts.

5.2 Core user stories

ID	Role	Feature	Benefit
S1	Casual Gamer	Reserve up to 4 seats and receive a QR code	Bring friends and check in quickly without payment
S2	Cafe Owner	Create recurring events with date, time and capacity	Attract players in slow hours without ad spend
S3	Cashier	Scan a player's QR code and see reservation details	Fast check-in with no manual entry
S4	Cashier	Log an F&B transaction by entering the total and scanning the QR	Accurate records, automatic 15% commission, loyalty points applied
S5	Developer	Audit all F&B transactions and commission calculations	Ensure accuracy and detect anomalies
S6	Cafe Owner	View a live dashboard of checked-in players and F&B orders	Monitor event performance as it happens
S7	Casual Gamer	See real-time seat availability	Know whether to join or look for another event
S8	Cashier	Handle a group payment on one QR code	Log one total and split loyalty points

ID	Role	Feature	Benefit
S9	Cashier	Process a refund or correct a logged transaction	Keep records accurate; customer not overcharged
S10	Cashier	Search for a reservation by name or phone number	Check players in even if the QR code is damaged

5.3 Functional requirements (SMART)

Requirements derived from stories S1–S3. Each requirement is specific, measurable, achievable, relevant and time-bound.

ID	Requirement	Measure / time bound
Seat reservation and QR code (S1)		
REQ-1	The system shall allow a casual gamer to reserve up to 4 seats for a selected board game event.	Maximum 4 seats; count enforced per reservation
REQ-2	The system shall generate a unique QR code linked to the reserved table.	Within 5 seconds of reservation confirmation
REQ-3	The system shall display the QR code in the player's mobile app and allow offline access.	Available without internet, from the time of reservation
REQ-4	The system shall send a push notification reminder with directions to the café.	2 hours before the event
REQ-5	The system shall allow the player to cancel or modify the reservation.	Up to 1 hour before the event start time
Recurring events (S2)		
REQ-6	The system shall allow the café owner to create a recurring event with a start date, end date and recurrence pattern (e.g., weekly).	Pattern saved on creation
REQ-7	The system shall allow the café owner to set a maximum event capacity.	Up to 20 seats per event; limit enforced
REQ-8	The system shall display the event to players after it is created or updated.	Within 1 minute
REQ-9	The system shall allow the café owner to specify the list of board games available for the event.	Saved at event creation
REQ-10	The system shall alert the café owner if an event is underbooked.	24 hours before the event starts
QR code check-in (S3)		
REQ-11	The system shall allow the cashier to scan a player's QR code with the tablet camera.	At check-in
REQ-12	The system shall display the player's reservation details (name, table number).	Within 3 seconds of scanning
REQ-13	The system shall validate the QR code and display a valid/invalid confirmation.	At scan
REQ-14	The system shall work offline and store cached reservations for check-in.	Up to 100 cached reservations
REQ-15	The system shall alert the cashier if a QR code is already used or invalid.	At scan

5.4 Business rules and non-functional requirements

Taken from the fully dressed use cases UC-3 (Reserve Seat) and UC-9 (Log F&B Transaction).

ID	Statement	Source
Business rules		
BR-1	A reservation allows a maximum of 4 seats; seats are non-transferable.	UC-3
BR-2	Cancellation or modification is allowed up to 1 hour before the event starts.	UC-3, REQ-5
BR-3	Commission is fixed at 15% on F&B sales only; tips are excluded. The platform keeps 15% and the café receives 85% net.	UC-9
BR-4	Loyalty ratio is 1 point per 1 SAR spent.	UC-9
BR-5	Refunds reverse the commission and loyalty points proportionally.	UC-9
Non-functional requirements		
NFR-1	Reservation response time shall be under 3 seconds.	UC-3
NFR-2	System availability shall be at least 99% on event nights.	UC-3
NFR-3	QR codes shall be unique per reservation.	UC-3, REQ-2
NFR-4	Transaction logging shall complete in under 20 seconds end to end.	UC-9
NFR-5	Commission shall be rounded to 2 decimal places.	UC-9
NFR-6	Offline mode shall store at least 100 cached transactions.	UC-9
NFR-7	Sync conflicts shall be resolved within 60 seconds of reconnection.	UC-9
NFR-8	Payment references shall have PCI-like protections.	UC-9

5.5 Open issues

Stories S4–S10 are covered by the use cases and rules above and in Section 6; their SMART requirements will be completed in the next iteration. Issues still to be decided:

- Behavior when the owner cancels an event after reservations are made (automatic notification and refund policy).
- Waitlist behavior when seats are no longer available, and how a waitlist interacts with seat priority.
- Refund flow: how commission and loyalty points are reversed.
- Handling of group payments where several players share one QR code.
- Tax handling in the commission base.

6. Use Case Titles

6.1 Actors

Actor	Description	Goals
Casual Gamer	End user who reserves seats and attends board-game events	Discover a nearby event, reserve a seat, check in with QR, earn and redeem loyalty points
Cafe Owner	Partner who hosts board-game events at their café	Schedule recurring events, fill off-peak tables, track attendance and revenue, receive accurate commission reports
Cashier	Staff member who checks in players and logs F&B transactions	Check players in fast, log transactions correctly, apply loyalty points, handle offline mode
Developer / Admin	Platform operator who manages accounts and audits data	Approve partners, audit transactions, verify the 15% commission, manage accounts, generate analytics
Notification Service (external system)	External service that delivers push and email notifications and receipts	Deliver reminders and receipts requested by the platform

6.2 Use case list (MoSCoW priority)

ID	Use case title	Primary actor	Priority
UC-1	Register Account	Casual Gamer / Cafe Owner	Must
UC-2	Browse Board Game Events	Casual Gamer	Must
UC-3	Reserve Seat	Casual Gamer	Must
UC-4	Cancel Reservation	Casual Gamer	Should
UC-5	Receive Event Notification	Casual Gamer	Must
UC-6	Schedule Board Game Event	Cafe Owner	Must
UC-7	Manage Event Session	Cafe Owner	Should
UC-8	Scan QR Code & Check-In Player	Cashier	Must
UC-9	Log F&B Transaction	Cashier	Must
UC-10	Apply Loyalty Points	Cashier	Must
UC-11	Redeem Loyalty Reward	Cashier	Should
UC-12	View Attendance Dashboard	Cafe Owner	Should
UC-13	Generate Commission Report	Cafe Owner	Must
UC-14	Audit Transactions	Developer / Admin	Must
UC-15	Manage User Accounts	Developer / Admin	Should
UC-16	Approve Cafe Partner	Developer / Admin	Must
UC-17	Generate Platform Analytics	Developer / Admin	Could

ID	Use case title	Primary actor	Priority
UC-18	Manage Board Game Catalog	Developer / Admin	Won't (for now)

Totals: 11 Must, 5 Should, 1 Could, 1 Won't (for now) = 18 use cases.

6.3 Traceability: user stories to use cases

User story / requirement	Use case(s)
Filter events by game and distance	UC-2
Reserve seat and receive QR code	UC-3
Cancel or modify reservation	UC-4
Push reminders	UC-5
Create recurring events	UC-6
Live attendance dashboard	UC-12
End-of-event commission report	UC-13
Scan QR / check-in	UC-8
Log F&B transaction	UC-9
Loyalty points and rewards	UC-10, UC-11
Audit transactions	UC-14
Verify partner accounts	UC-16

Real-time seat availability (S7) is part of UC-3 (step 2) and manual search (S10) is extension 3a of UC-9. Group payment (S8) and refunds (S9) are still open issues (Section 5.5).

7. Context Diagram

The context diagram shows Tawlatna as a single system and the external entities that exchange information with it. Details of each data flow are listed in Table 7.1.

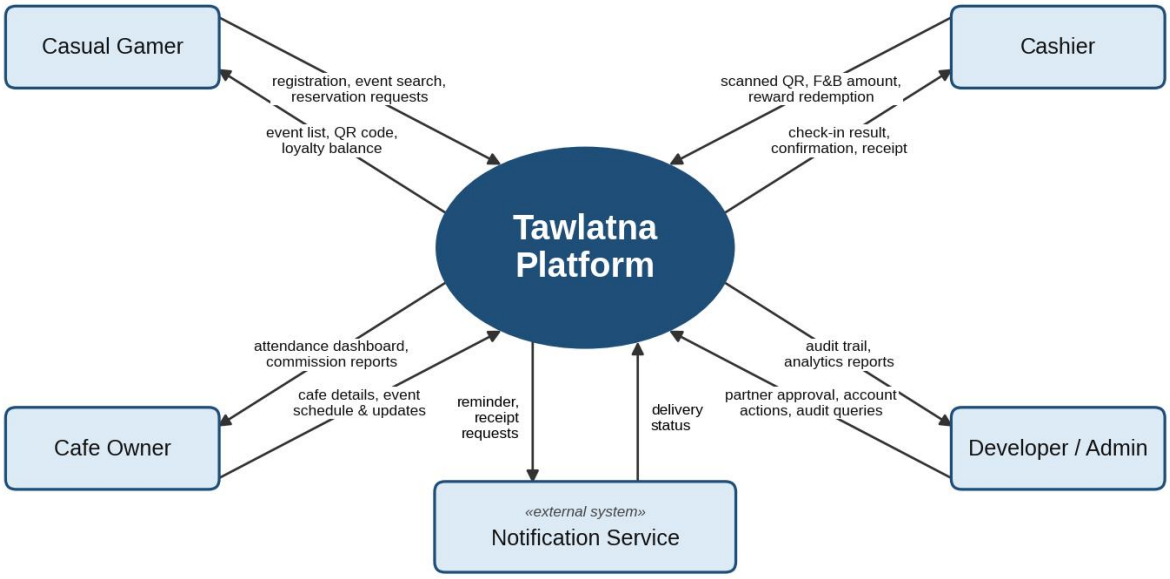

Figure 2 – Context diagram of the Tawlatna platform

Table 7.1 – Data flows at the system boundary

External entity	Sends to Tawlatna	Receives from Tawlatna
Casual Gamer	Registration details; event search filters; seat reservation requests; cancel or modify requests	Event list; real-time seat availability; reservation confirmation and QR code; loyalty balance
Cafe Owner	Café details; event schedule (date, time, capacity, game list, recurrence); event updates or cancellations	Live attendance dashboard; commission reports; underbooked-event alert
Cashier	Scanned QR code; F&B total; reward redemption request; manual reservation search	Reservation details and check-in result; transaction confirmation and new loyalty balance; invalid or already-used QR alerts; receipt
Developer / Admin	Partner approval decisions; account create, suspend or delete actions; audit queries; analytics requests	Partner applications; audit trail; platform analytics
Notification Service (external)	Delivery status	Reminder, notification and receipt requests

Boundary note: Apple Pay and STC Bank appear as key partners in the Business Model Canvas and feasibility study. Seat reservations are paid directly in the app, and the F&B commission is collected from the café register..

8. Project Management

8.1 Development approach

Tawlatna will be built with an Agile, incremental approach. The MoSCoW-prioritized use case list (Section 6.2) acts as the product backlog: Must-have use cases are built first, each increment ends with working software that is reviewed, and the team adapts the plan after every review. All code is committed daily to a company-owned GitHub/GitLab repository with standard documentation, using a modular stack (Flutter front end, Firebase/Node.js back end).

Table 8.1 – Proposed release plan (derived from the MoSCoW priorities and the feasibility milestones)

Increment	Target	Use cases	Goal
1. Core booking and check-in	Month 4 (beta)	UC-1, UC-2, UC-3, UC-5, UC-6, UC-8, UC-16	Players register, browse, reserve and receive a QR code; approved cafés schedule events; cashiers check players in
2. Transactions and trust	Month 6 (soft launch)	UC-9, UC-10, UC-13, UC-14	F&B logging, commission, loyalty points, commission reports and audit trail
3. Enhancements	Month 7 and after	UC-4, UC-7, UC-11, UC-12, UC-15 (Should); UC-17 (Could)	Cancellations, event management, reward redemption, live dashboard, account management, analytics

UC-18 (Manage Board Game Catalog) is Won't-for-now and is not scheduled.

8.2 Team and roles

Role	Responsibility	Requirements
Managing Director	Overall strategy, legal compliance, profit and loss management	Bachelor's in Business/Management; 5+ years' experience
CTO / Lead Mobile Developer	App architecture, payment-gateway security, portal maintenance	B.Sc. in Computer Science/Software Engineering; mobile-development proficiency
Cafe Partner Manager	Café acquisition, contract negotiation, relationship management	BA in Business/Marketing; strong Jeddah network
Lead Game Master	Curates game kits, localizes rulebooks, schedules hosts	Community-hosting experience; board-game expertise

The founding team oversees all functions for the first three months. Planned additions: a Social Media Specialist and a Customer Support Representative within six months, then two part-time Field Game Masters and a Business Analyst within the first year, for a team of nine by the end of Year 1.

8.3 Schedule

The project runs 7 months from initial setup to public launch in Jeddah. A detailed task-level schedule will be developed by the assigned project team once the project is approved.

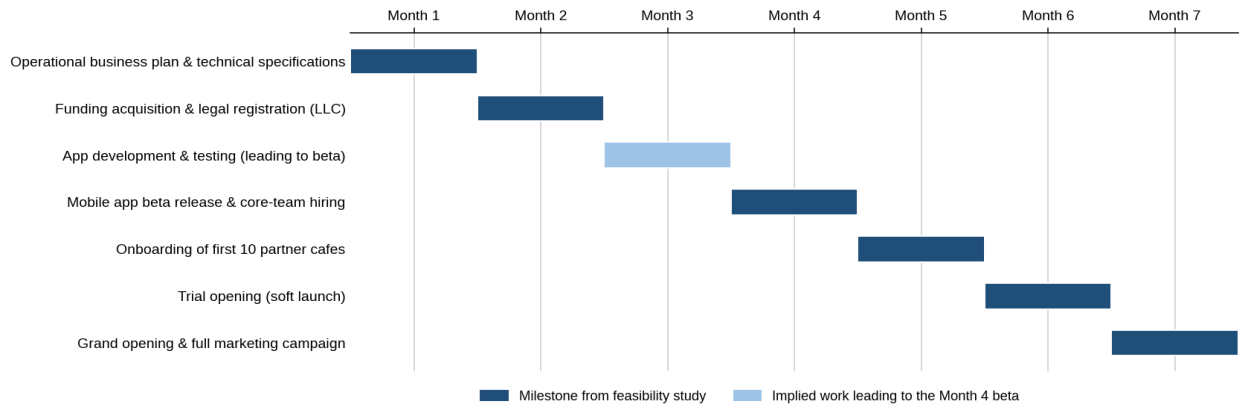

Figure 3 – Project schedule (Months 1–7)

8.4 Budget and financial plan

Initial seed funding is **SAR 250,000**, financed entirely by equity (SAR 187,500 from the founders and SAR 62,500 from an angel investor or seed grant), with no debt. Break-even is expected in **Month 10**, requiring about 1,200 active monthly bookings across 15 partner cafés.

Financial summary (SAR)	Year 1	Year 2	Year 3
Sales (commissions and booking fees)	320,000	780,000	1,450,000
Net profit	92,625	360,750	711,750
Total assets	250,000	420,000	700,000
Net cash flow	295,000	335,000	680,000

Assumptions: the seed funding is secured before Month 1; all milestones are completed on schedule; figures are annual totals with no carry-over of transactions between years. Expected return on investment is about 144% over three years, with dividends starting in Year 2.

8.5 Risk management

Risk	Scenario	Impact / likelihood	Mitigation and contingency
Human resources	The CTO / lead developer leaves mid-project.	High / Medium	Company-owned repository, daily commits, documentation and a modular stack so a replacement developer can start within 48–72 hours.
Café partner operations	Café staff forget or refuse to scan QR codes during busy shifts.	High / High	Single-tap verification on the dashboard; quarterly incentives for baristas based on verified transactions.
Technical	A payment gateway (Apple Pay or STC Bank) is down during peak hours.	High / Low	Offline-cached QR codes on the customer's device; cafés scan and cache checks locally and sync when connectivity returns.
Market / retention	Customers stop booking after 1–2 game nights.	Medium / Medium	Loyalty points and a weekly rotation of featured board-game titles across partner cafés.

Broader risk categories

Category	Risk	Mitigation
Internal	A small team needs multi-disciplinary skills.	Agile practices; outsource non-core administrative tasks.
External market	Low barista adoption or improper QR scanning.	Ultra-simple tablet UI that needs less than one minute of training.
Economic	Inflation in café prices could reduce spending.	Keep the value centered on low-cost social entertainment.
Regulatory	Updates to e-wallet transaction policy.	Strict adherence to SAMA guidelines for digital transactions.

8.6 Legal and regulatory compliance

- SDAIA (Saudi Data & AI Authority) data-protection rules.
- ZATCA e-invoicing requirements.
- SAMA guidelines for digital-wallet transactions.
- Standard commercial registration (CR) and licensing fees.
